Understand the opportunity

Covered in this section

- Understanding unified endpoint management
- Market opportunity
- Trends driving unified endpoint management
- Analyst review

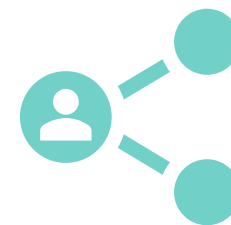

Understanding Unified Endpoint Management

Unified endpoint management, or UEM, has evolved from Enterprise Mobility Management (EMM) and Mobile Device Management (MDM) to help information technology and security teams improve user productivity, reduce threats, and maintain compliance.

A **single console** to configure and manage laptops, desktops, smartphones, tablets, laptops, kiosks, and IoT

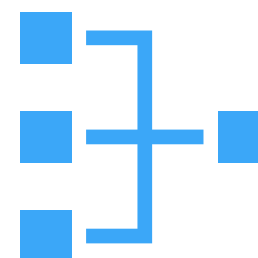

integration point with key related technologies (SIEM, IAM, CMT) and Microsoft Ecosystem

Enterprise security level:

- Mobile Threat Management
- Containerization
- Identity Access Management
- Patching

A **single, user-centric view** to enhance end-user support and gather workplace analytics

UEM and security concerns in a work-from-anywhere world

Understand the buyer

Covered in this section

- Target clients
- Target buyers and pain points
- Conversation starters

Target clients

Client profile

- Any organization where users interact with devices including smartphones, tablets, and laptops to do their job
- IT department focused on data security among mobile employees
- Companies that allow the use of corporate and/or personal devices (BYOD)
- Needs to set policy and compliance rules for diverse endpoint landscape
- Requires the management and securing of data on devices and within corporate apps
- Needs to manage user identity and potential threats across devices and users

Organizational size

- Small and midsize (80%)
10-500 employees
- Large enterprise (20%)
>1000 employees

Top industries focused on mobility

- 13.6% Wholesale and Distribution
- 13.3% Industrial Products
- 13.2% Government-State/Provincial/Local

Average deal size

- \$5-8k USD

Target buyers and pain points

Buyer	Pain Points
IT Manager Small & Medium Enterprise	• Hard to deploy/offboard devices via an IT helpdesk • Complex onboarding experience for employees across mobile corporate/employee-owned, onsite/remote • Complex experience accessing corporate resources like enterprise and 3rd-party SaaS applications that impact employee productivity on the job
Chief Information Officer Large Enterprise	• Lack of centralized visibility and remediation of device application and network threats on mobile devices • High risk of corporate data leaks via unauthorized and compromised devices • Not able to identify and prioritize OS and applications that need to be patched based on risk

Conversation starters

Key questions to ask:

- Are you currently able to update and report on all endpoints from one console?
- Are you able to effectively enforce device policies today?
- How do you currently keep up to date on operating systems and devices to stay ahead of associated potential risks and threats?
- How easy is it for users to currently troubleshoot and resolve issues on corporate devices or with corporate applications?
- How do you keep users from sending sensitive data across unauthorized or insecure channels?
- How do you control which users are accessing data, and if they are authorized to do so?
- How do you currently detect and stop threats on devices or ensure that users aren't accessing data from a compromised device?

Understand the solution

- Elevator pitch
- Business value
- Pricing and packaging

Overview of Unified Endpoint Management

IBM Security

MaaS360 unifies,
secures, and
manages devices,
apps, and users

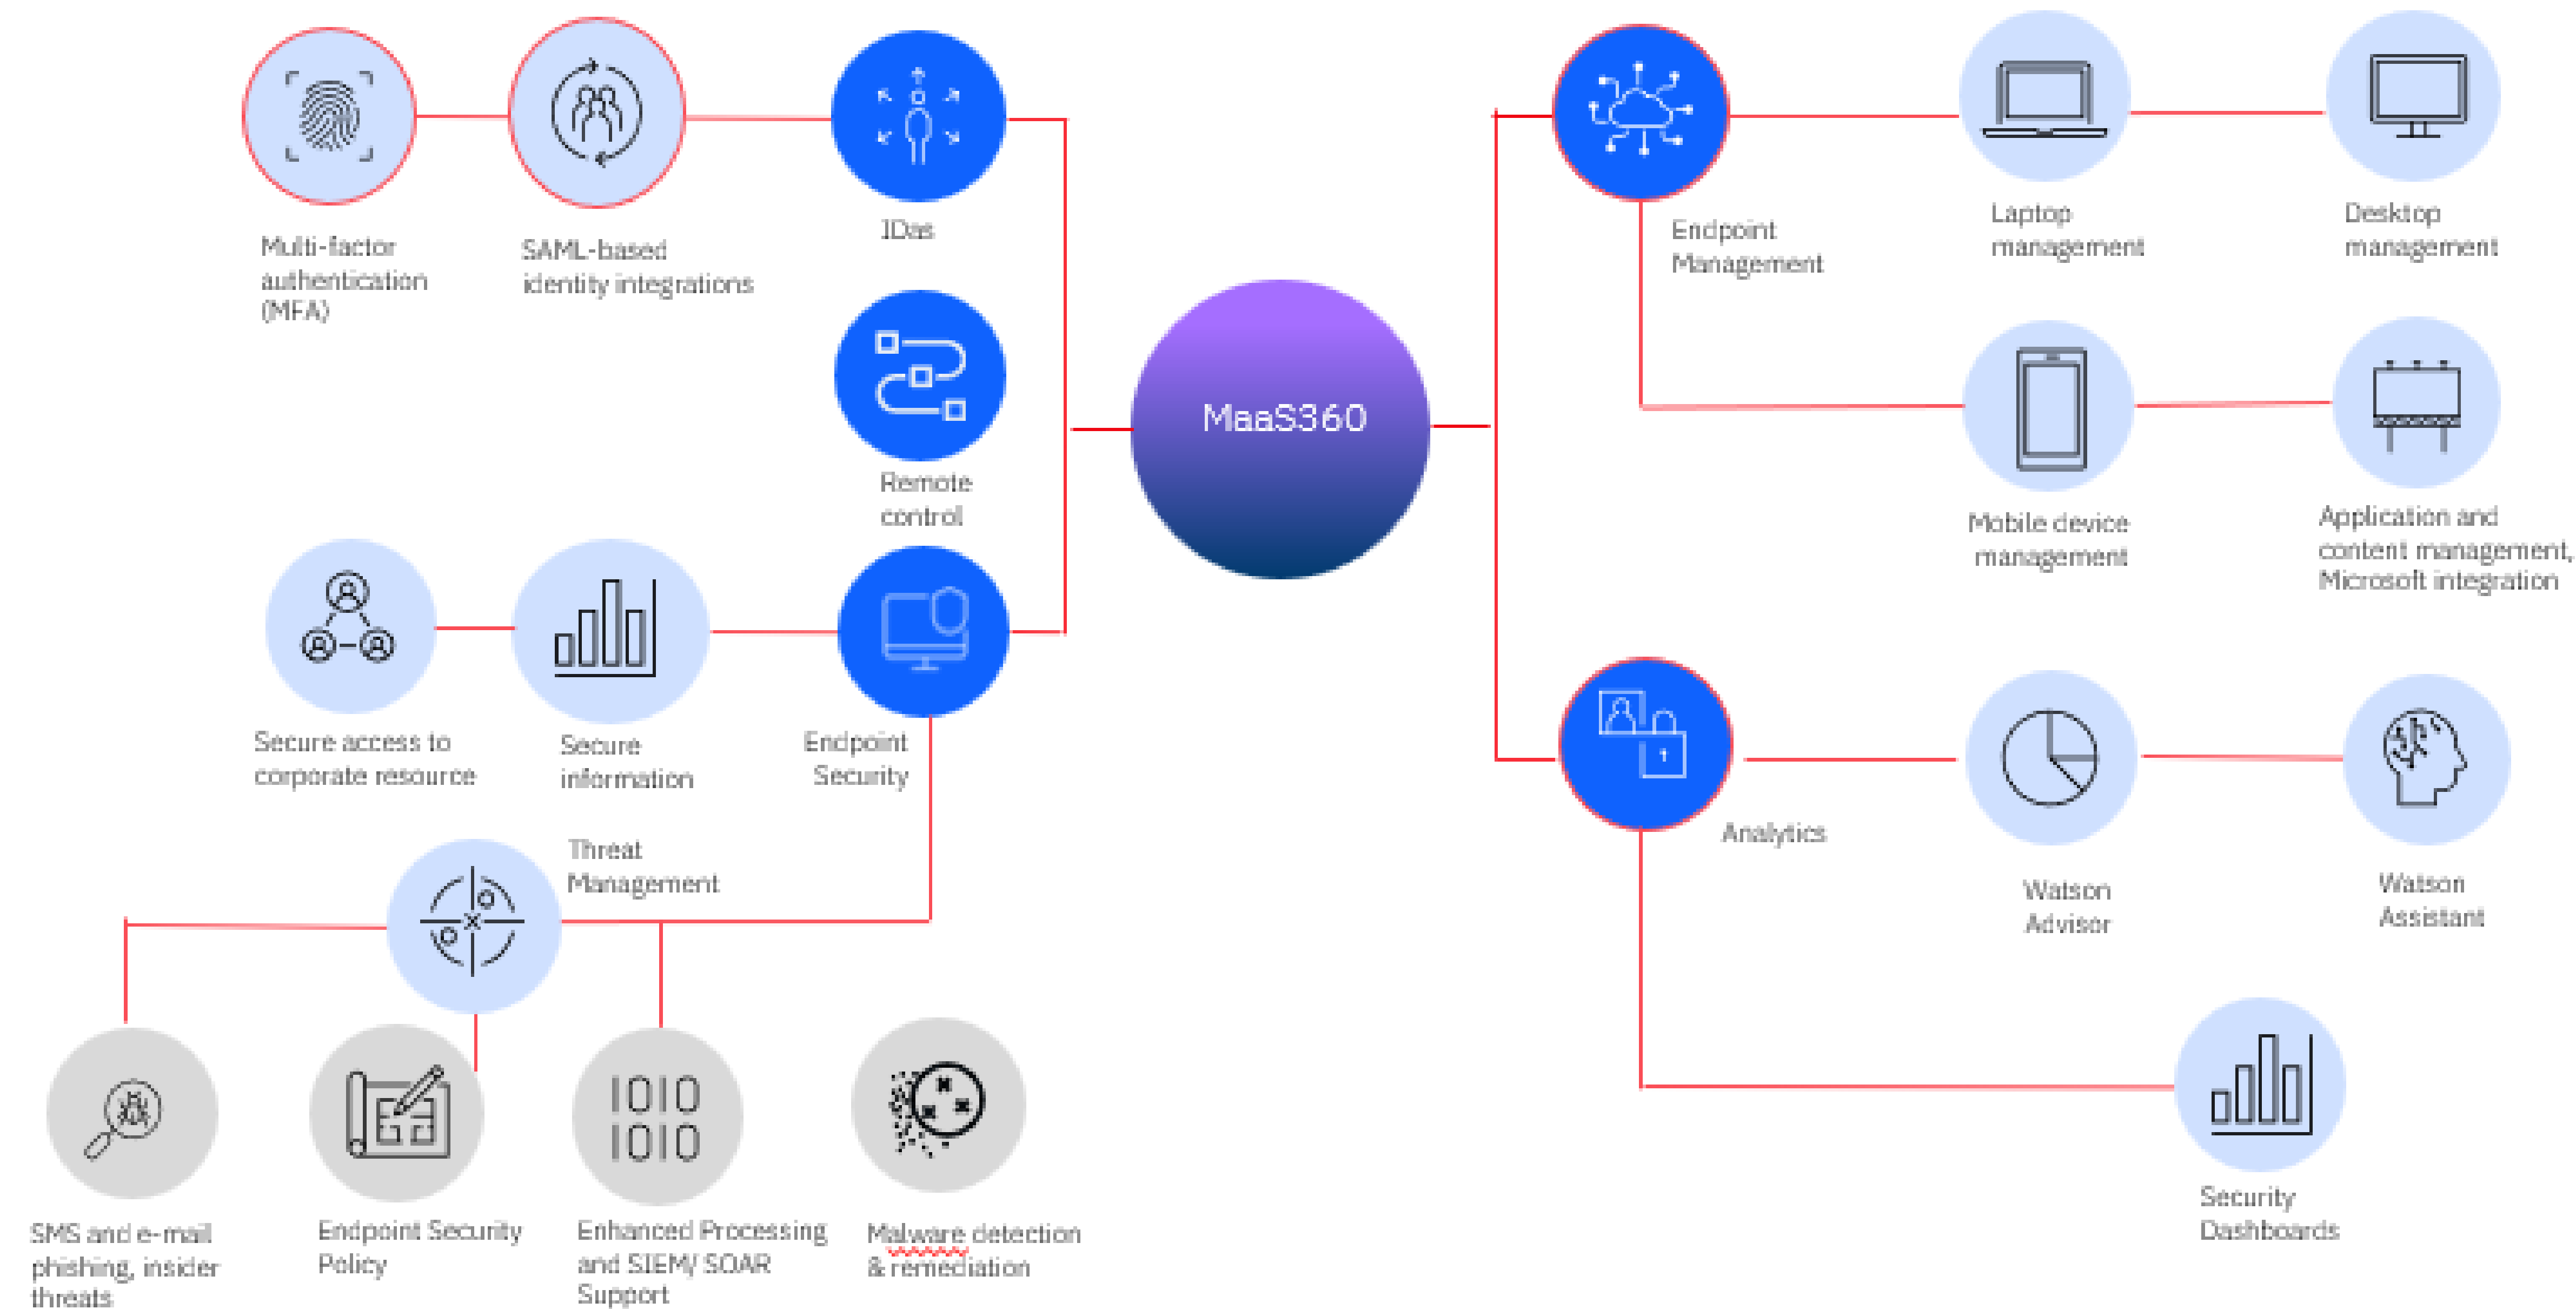

MaaS360: Vision and strategy

A unified management platform that enables hybrid work and digital automation to improve employee productivity and simplify endpoint security

Unified endpoint management for hybrid workforce	Specialized frontline device management	Integrated endpoint security	Improved digital experience outcomes with gen AI & analytics
Enable best-in-class endpoint management across mobile and laptops to support the hybrid workforce	Simplify purpose-built and unattended frontline device management for industry-focused use cases	Integrate mobile threat detection into the management platform to secure endpoints and enable IT-Ops and Sec-Ops convergence	Measure and improve administrator and end-user productivity and experience through device, app, and user analytics and automation

... and differentiates by layering on top of other Management/Security Platforms

Product overview

What sets MaaS360 apart from top UEM competitors?

Quick deployment

- Set up end users twice as fast
- Cut endpoint config time by 96%

Open platform

- Key security integrations such as SIEM and IAM
- Comprehensive Microsoft coverage (for example O365, Azure AD, Graph, and so on)

Security container

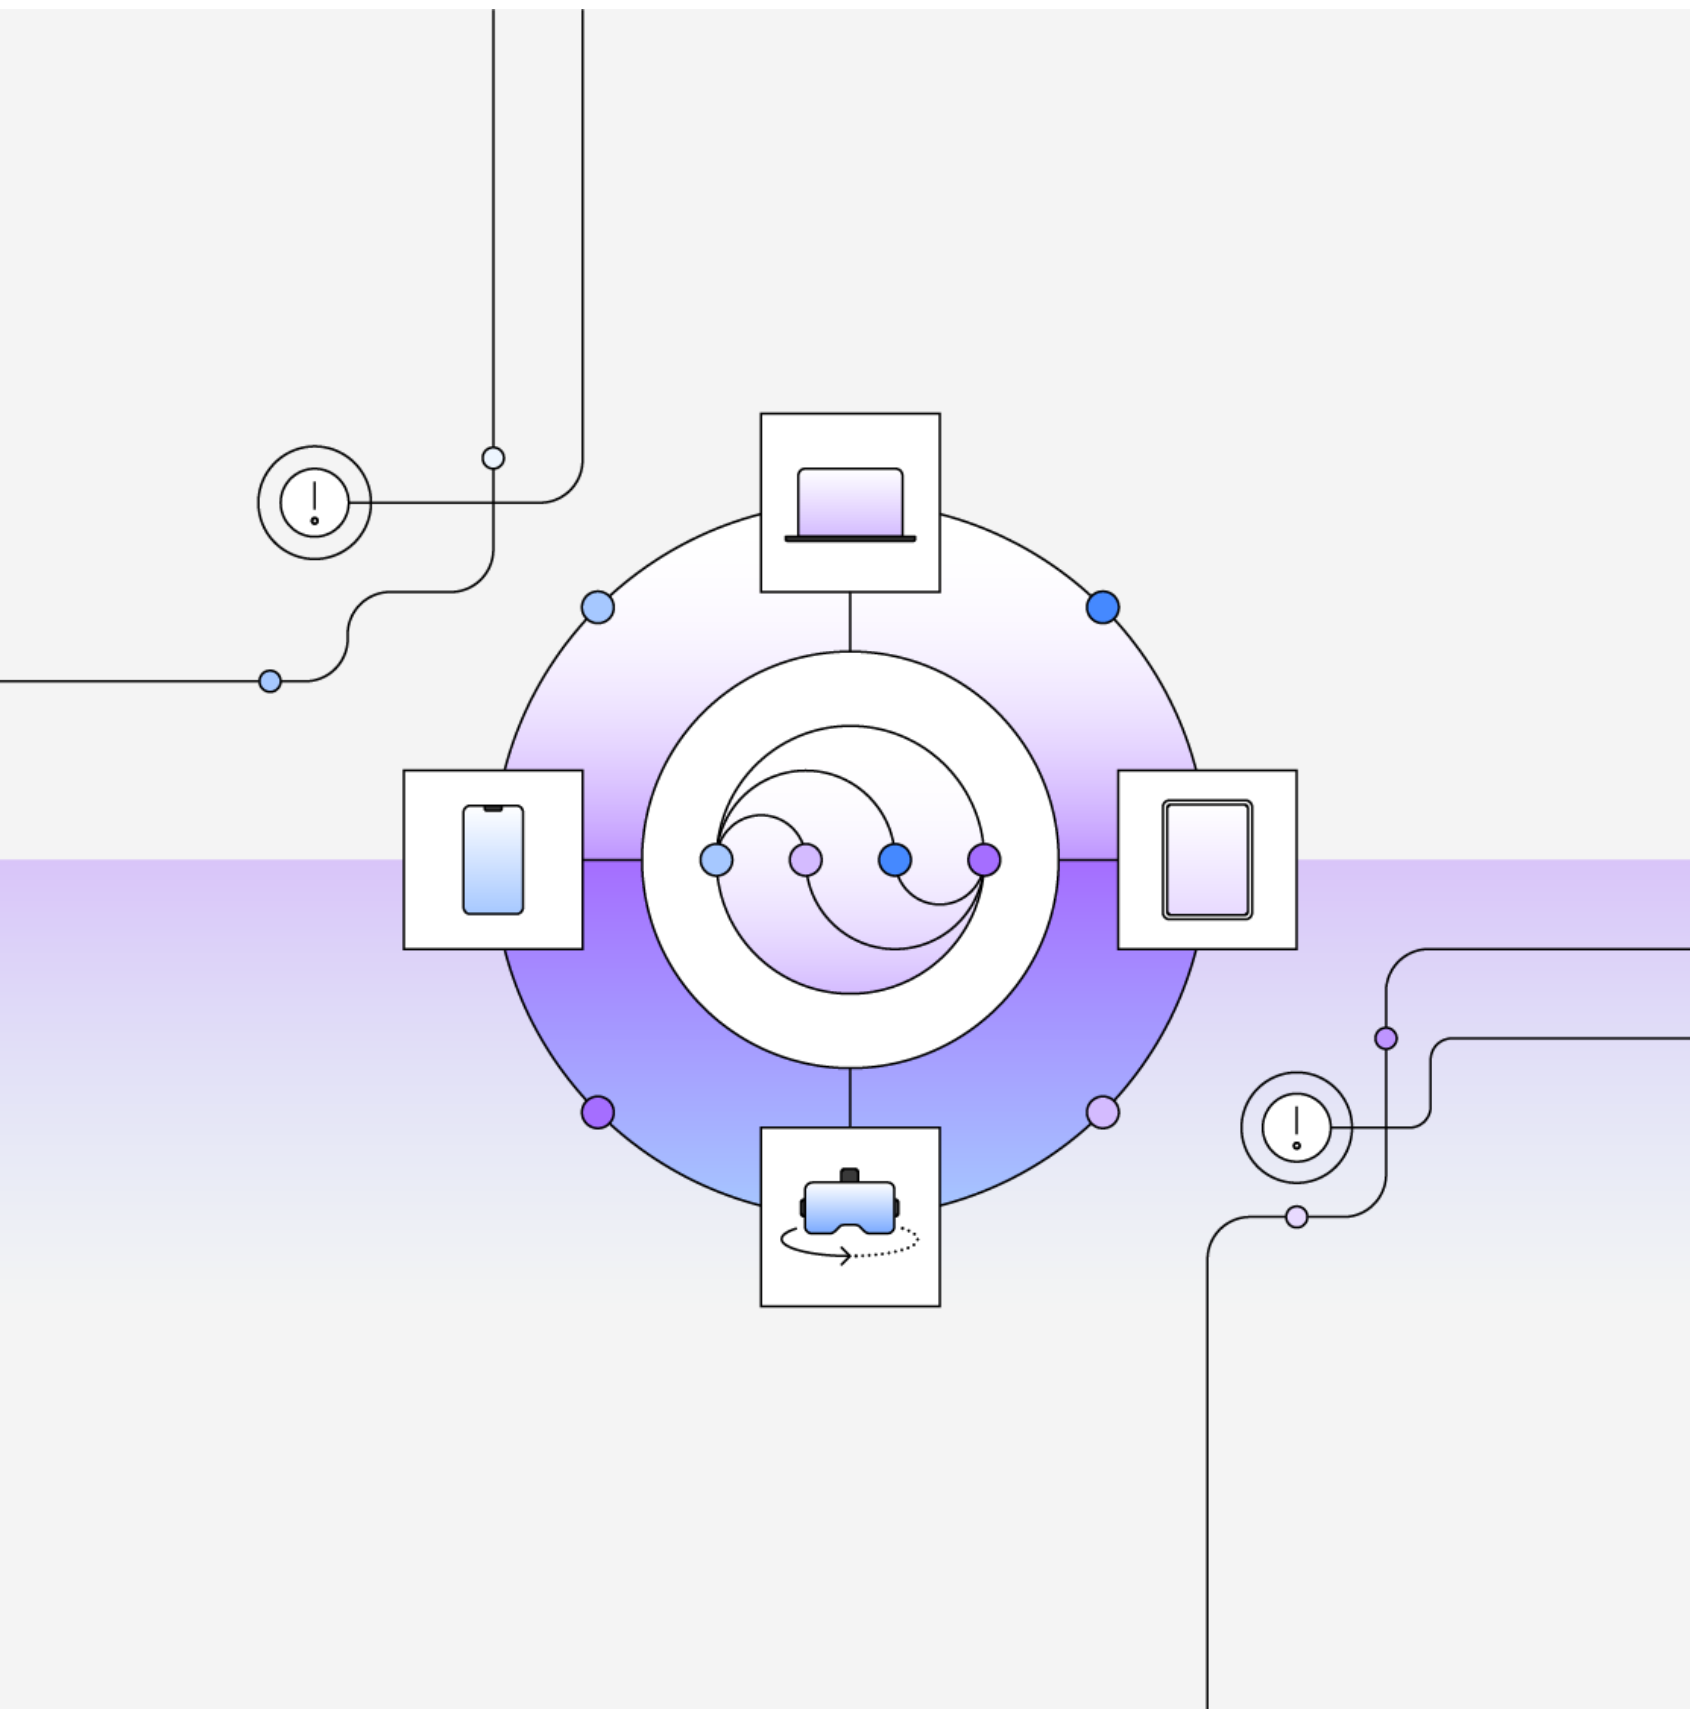

- Data leak prevention (DLP) and regulatory compliance
- Native-like UX improves productivity

AI Insights

- Proactive threat detection and remediation
- Actionable cognitive insights

Elevator pitch

MaaS360 is a unified endpoint management solution that is designed to help organizations manage their endpoint fleet. It can seamlessly deploy apps and data across all types of end-user devices, boosting productivity and efficiency. It also offers robust capabilities to manage devices that are used by frontline workers to not only make them more productive but also protect the device from misuse and monitor device hygiene remotely. The MaaS360 integrated mobile threat defense safeguards devices and data from cyberthreats to maintain a strong security posture. It delivers immediate value to business and IT leaders who are focused on ROI and countering the increasing number of mobile threats.

Understand the competition

Covered in this section:

- Top three competitors - strengths and weaknesses
- Secondary competitors

Competitor strengths

Competitor	Platform and legacy	Key strength	Competitive scenario
Microsoft	Microsoft is packaging Intune “for free” for the basic MDM features and bundling it into Microsoft 365 E3, E5, F1, F3, Enterprise Mobility + Security E3 and E5, and Business Premium plans. For more advanced features, Intune is bundled with Azure and has 2 add on-s.	• Significant, sustained growth in install base and incremental feature set expansion • Gaining traction on using just their products • License bundling • Broad endpoint diversity • Integration with native offerings • Everyone has MSFT & using Azure AD • Expanded/improved MacOS support	Positions itself as “for free” in order to convert clients from competitors to MS clients. Their recently updated message is similar to MaaS360’s, promising one point of management for devices and security at Zero Trust level. Productivity is one of their differentiators, as it is bundled within MS365.
VMware	Workspace One is the only vendor cited by Gartner with a complete package that includes device management, SSO, remote support, remote access, endpoint security, analytics, automation, and virtualization. Workspace One is a collection of multiple offerings, each focused on a capability (MDM offering, Desktop offering, Advanced offerings and so on) with security and advanced analytics as add-ons	• Good end-to-end offering • Best overall admin experience • Complete Anywhere WorkSpace offering • TechZone and Tech Marketing Comms	Workspace One is positioning itself as THE intelligence-driven solution to create a digital, work-from-anywhere workspace platform. They leverage their DEX features- the latest trend in URM space- and their security capabilities to present an automated, comprehensive solution destined for the modern work styles.
Ivanti	Ivanti Neurons for UEM offers broad support for nearly all endpoints. Its operations are geographically diversified, and its clients tend to be enterprise organizations. Ivanti continues to add intelligence and automation to improve discovery, automation, self-healing, patching, zero-trust security and DEX. It also bolsters integration with IT service, asset, and cost management tools	• Heavy on-premises install base – very channel depended • Broad support capability • UEM is a strategic product • Increased investment • Robust discovery • Vertical markets – Healthcare, Logistics	Ivanti position themselves as the enablers of the working-from-anywhere employees with their UEM Neurons offering as “A single pane of glass to discover, manage, and secure all devices.” that can “See everything. Secure everything. Heal everything.” Ivanti Neurons capitalizes on the “self-service” capabilities, the “all in one” concept and their development of DEX capabilities, the latest market trend.

Competitor weaknesses

Competitor	Key weaknesses
Microsoft	• Good enough functionality but still complex and not easy to use • Branding & entitlement confusion • No 3rd party app patching is included – it must be purchased • No Chrome or Linux support • Autopilot/Hybrid Domain - join complexities • Incomplete functionality versus competition
VMware	• Limited adoption of full-stack Workspace • Pricing is high if advanced functions are needed • Not investing in the product while the Broadcom acquisition is underway • Microsoft 'frenemy' relationship • Enterprise-level cost versus value
Ivanti	• Administrator experience is fragmented – multiple windows • Branding • Fragmented and complex licensing models • Traditionally very channel dependent • Heavy on-premises install base • Several product back-ends and varying degrees of license and revenue models • Client concern about support and effectiveness of Neurons discovery

Secondary competitors

Competitor	Comments
ManageEngine	• Niche player but making waves • Broad endpoint diversity • Low-cost offering • SaaS offering does not contain all on-premises features • Licensing model is complex • No remote access • No Zero Trust story
jamf	• Jamf is a UEM solution that exclusively manages Apple devices (including Mac Management, iPad/iPhone Management, and Apple TV Management) through a single console and allows users to self-enroll multiple Apple devices of their choice. • A 20-year history of helping organizations manage Apple devices • Recently bought Wandera

Industry use cases

Healthcare

The company was able to secure protected information on all mobile devices connecting to their network, comply with healthcare regulations, and reduce the IT workload along with cost of managing mobile devices.

- Secure electronic health records (EHR)
- Comply with HIPAA/HITECH and other healthcare regulations
- Support organization-owned, physician/nurse shared, and bring your own devices
- Distribute healthcare applications and documents

[Global Pharmaceuticals Company](#)

Finance

Use IBM Security MaaS360 to equip employees to seamlessly and securely access pertinent work resources and productivity applications from business and personal devices anytime from anywhere.

- Secure sensitive financial information
- Comply with PCI-DSS, FINRA, SEC, and SOX
- Security policy enforcement and passcode protection
- Track/manage assets, licenses, usage, data plans

[Attijariwafa Bank Egypt S.A.E](#)

Retail

Manage retail mobile initiatives including business-critical mobile applications, point-of-sale (POS), stockroom, bar code, QR code, supply chain, inter-store communications, and service tickets.

- Comply with PCI-DSS, SOX, and FRCP
- Distribute applications and documents
- Enforce location-based policies

[Read MaaS360 peer reviews for retail](#)

Industry use cases

Manufacturing

IBM Security with MaaS360 enables manufacturers with a secure mobile strategy that results in faster innovation, productive client engagements, operational efficiency, and bottom-line benefits.

- Streamline greater productivity and efficiency
- Comply with PCI-DSS, SOX, ITAR, and FRCP
- Enhance client response times
- Secure intellectual property and data

[Read MaaS360 peer reviews for manufacturing](#)

Public

Equip government agencies to begin with essential, comprehensive management capabilities and layer on more advanced tools quickly and easily as their needs grow.

- FedRAMP and FISMA authorized
- Support government-owned and BYOD programs
- Telework, Green IT, and Cloud 1st Initiatives
- Continuous monitoring and policy enforcement
- Track/manage assets, licenses, usage, and data plans

[Leeds Library Service](#)

Education

Provide K-12 and colleges with the visibility, flexibility, and automated controls to manage all school, student, and employee-owned devices in a single, cloud-based, software-as-a-service solution.

- Manage faculty, student, and staff devices
- Comply with CIPA, FERPA, and other regulations
- Distribute e-learning applications and documents
- Support Apple Volume Purchase Program
