

IBM MaaS360

Mobile Security Suite

Eliminate security gaps and reduce operational overhead with fully unified device management (UEM) and mobile threat defense (MTD) offering

Highlights

Unified Endpoint Management & Security—One Platform, Complete Coverage

Comprehensive Device Management Capabilities

Advanced Mobile Threat Defense (MTD)

Simplified Operations & Business Impact

Organizations struggle with managing diverse mobile devices and protecting corporate data on personal devices, ensuring compliance with security policies and reducing information technology complexity. A unified platform that combines device management and mobile threat defense can simplify security, improve efficiency and reduce risk by providing real-time threat detection, automated remediation and conditional access controls.

IBM MaaS360 is a unified endpoint management and mobile threat defense tool that provides a single platform for managing and securing mobile devices. It combines device management and mobile security capabilities, enabling organizations to control and protect devices, detect threats and enforce security policies. The solution integrates with Verify to provide single sign-on, multi-factor authentication (MFA) and conditional access capabilities and with Mobile Threat Defense technology to detect and prevent mobile threats, providing a comprehensive security solution

Unified Endpoint Management & Security—One Platform, Complete Coverage

MaaS360 Mobile Security Suite is the only fully integrated solution that combines Unified Endpoint Management (UEM) and Mobile Threat Defense (MTD) into a single platform. This unified approach simplifies IT operations, enhances security and reduces costs.

By integrating UEM and MTD, MaaS360 provides comprehensive coverage for all endpoints, including smartphones, tablets, laptops and specialized devices. Administrators can manage and secure devices from a single console, streamlining workflows and reducing complexity.

The platform detects and responds to mobile threats in real-time using advanced AI and machine learning algorithms, minimizing the risk of data breaches. MaaS360 also enhances operational efficiency by automating routine tasks, such as device enrollment and policy enforcement.

From a business perspective, MaaS360 offers significant cost savings and risk reduction by consolidating UEM and MTD into a single solution, eliminating multiple licenses and reducing the total cost of ownership. Its comprehensive security features also help organizations comply with regulatory requirements, safeguarding their reputation and ensuring business continuity.

Comprehensive Device Management Capabilities

MaaS360 Mobile Security Suite offers comprehensive device management capabilities that maximize productivity while maintaining robust security. Its unified endpoint management (UEM) foundation enables seamless enrollment and management of various device types from a single console. Key features include automated enrollment workflows, granular policy control and advanced application management.

The platform provides intelligent analytics and AI-driven insights to help IT teams identify and address potential issues proactively. Real-time monitoring and reporting offer visibility into device health, application usage and security posture. By leveraging MaaS360, organizations can create a secure and productive mobile environment, simplifying IT operations and freeing up resources for strategic initiatives.

Advanced Mobile Threat Defense (MTD)

MaaS360 Mobile Security Suite is the only fully integrated solution that combines Unified Endpoint Management (UEM) and Mobile Threat Defense (MTD) into a single platform. This integration bridges the gap between device management and mobile security, simplifying management, enhancing efficiency and reducing risk.

By integrating MTD, MaaS360 provides advanced protection against mobile threats like phishing, malware and data exfiltration. The unified platform streamlines device and security policy management, allowing admins to enforce security measures, monitor compliance and respond to threats from a single console. This results in a more efficient and effective security posture.

The integrated approach benefits businesses through simplicity, reduced complexity and increased efficiency, allowing IT teams to focus on strategic initiatives.

Simplified Operations & Business Impact

MaaS360 Mobile Security Suite combines Unified Endpoint Management (UEM) and Mobile Threat Defense (MTD) into a single platform, bridging the gap between device management and mobile security. This integration simplifies operations, enhances efficiency and reduces risk.

By managing and securing all endpoints from a single console, IT teams can streamline workflows, automate tasks and ensure consistent policy enforcement. UEM configures and updates devices, while MTD provides advanced threat detection and prevention.

The result is a holistic security posture that protects devices and data, achieving cost savings, improving productivity and lowering total cost of ownership. Enhanced security mitigates data breach risks, protects sensitive information and maintains regulatory compliance, safeguarding the organization's reputation and ensuring business continuity.

Conclusion

IBM MaaS360 delivers a unified endpoint management and mobile threat defense solution, combining device management and mobile security in a single platform. This integration enables organizations to manage and secure mobile devices, applications and data from a single console, simplifying security and improving efficiency. By leveraging IBM MaaS360, organizations can reduce risk and support informed purchase decisions, ultimately protecting their corporate data and ensuring compliance with security policies.

Why IBM?

IBM MaaS360 stands out as a unified endpoint management and mobile threat defense solution, combining device management and mobile security into a single platform. This integration is backed by industry recognition, including rankings from leading analysts and numerous patents demonstrating technical leadership. By choosing IBM MaaS360, organizations can simplify their security posture, reduce risk and improve efficiency, making it the right choice for businesses seeking a comprehensive mobile security solution.
